FilesAnywhere since 1999

Flex Storage Pro Overview

FilesAnywhere file management with your preferred storage

Flex Storage Pro connects FilesAnywhere to your existing storage, giving your team one interface to manage and share files while you retain control over where your data is stored. Choose a storage configuration that fits your business, data residency goals, and collaboration needs.

Choose your storage

Storage option	How it supports your business
Microsoft Azure Blob Storage	Connect scalable cloud storage for business files and documents.
Azure Data Lake	Use your existing data storage environment alongside FilesAnywhere file management.
AWS S3 Storage	Connect Amazon cloud storage for scalable file storage and access.
Government cloud options	Azure Government and AWS Government options are available for organizations with specific cloud requirements.
On premises storage	Explore a configuration using your own infrastructure with the FilesAnywhere team.

Keep control as your business grows

Your storage and your configuration Keep the storage solutions you trust and tailor your setup to your organization.

Regional flexibility Select storage locations that align with your data residency goals. Multi-region configurations can support distributed teams and redundancy.

Location-aware performance Choose storage closer to your users to help improve upload and download speeds.

FilesAnywhere since 1999

Flex Storage Pro Features

Manage content and support collaboration across your teams

File management and collaboration

One interface Manage files across your configured storage environment through FilesAnywhere.

Version control Track file versions and retain access to earlier content according to your account configuration.

File sharing Help teams exchange files and collaborate across locations and storage zones.

Access permissions Define user permissions so authorized team members can access the information they need.

Activity visibility Use audit trails and security controls to support internal oversight and information governance.

Where Flex Storage Pro fits

Distributed teams Support collaboration across locations while maintaining control over storage placement.

Data-driven businesses Connect existing scalable storage and simplify access to the files your teams use.

Recovery planning Consider multi-region storage as part of your redundancy and disaster recovery strategy.

Hybrid environments Plan a storage configuration around your existing cloud and on premises infrastructure.

Get started with your storage configuration

1 Discuss your requirements Review storage providers, regions, user needs, and any data residency requirements with FilesAnywhere.

2 Connect and configure Connect the selected storage, set access permissions, and confirm the features supported by your setup.

3 Begin using FilesAnywhere Start uploading, organizing, and sharing files with your team.

Management options and storage costs

Manage your storage yourself, or ask FilesAnywhere about storage management for an additional fee. Third-party storage charges are paid by the customer. Feature availability depends on the selected storage provider and account configuration.
